

	Unit 1: Nature of Matter (6 weeks)	Unit 2: Transformations of Energy (6 weeks)	Unit 3: Nature of Sound and EM Radiation (6 weeks)	Unit 4: Contact Forces (6 weeks)
Essential Standard(s)	<p><b>S8P1: Obtain, evaluate, and communicate information about the structure and properties of matter.</b></p> <p>*Matter and Energy are conserved within a closed system (chemical energy, bonds, &amp; atoms).</p>	<p><b>S8P2 Obtain, evaluate, and communicate information about the law of conservation of energy to develop arguments that energy can transform from one form to another within a system.</b></p> <p>*Energy is transferred or transformed within a system (mechanical energy, kinetic energy, and potential energy).</p>	<p><b>S8P4. Obtain, evaluate, and communicate information to support the claim that electromagnetic (light) waves behave differently than mechanical (sound) waves.</b></p> <p>*Mechanical and electromagnetic waves have different properties and behaviors based upon their medium.</p>	<p><b>S8P3. Obtain, evaluate, and communicate information about cause and effect relationships between force, mass, and the motion of objects.</b></p> <p>*Force, mass, and motion of objects relate to the speed, velocity, and acceleration of moving objects.</p>
Learning Targets for Essential Standard(s) with estimated teaching time	<p>I can explain how matter and energy are conserved within a system.</p>	<p>I can analyze and interpret how energy is transferred between objects and transformed within a system.</p>	<p>I can differentiate between the properties and behaviors of mechanical and electromagnetic waves.</p> <p>I can explain properties, behaviors, and application of electromagnetic waves.</p> <p>I can explain properties, behaviors, and application of mechanical waves.</p>	<p>I can relate speed, mass and velocity to the motion of objects.</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> determine the relationship between velocity and acceleration in that acceleration is a rate of change in velocity</li> <li><input type="checkbox"/> demonstrate the effect of balanced and unbalanced forces on an object in terms of gravity, inertia, and friction</li> </ul> <p>recognize that every object exerts gravitational force on every other object</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> recognize that the forces exerted by objects depend on how much mass the objects have and how far apart they are</li> </ul>
Supporting Elements	<p>a. Develop and use a model to compare and contrast pure substances (elements and compounds) and</p>	<p>a. Analyze and interpret data to create graphical displays that illustrate the relationships of kinetic energy to mass and speed, and potential energy to mass and</p>	<p>a. Ask questions to develop explanations about the similarities and differences between electromagnetic and mechanical waves.</p>	<p>a. Analyze and interpret data to identify patterns in the relationships between speed and distance, and velocity and acceleration.</p>

	<p>mixtures.</p> <p><b>b.</b> Develop and use models to describe the movement of particles in solids, liquids, gases, and plasma states when thermal energy is added or removed.</p> <p><b>c.</b> Plan and carry out investigations to compare and contrast chemical (i.e., reactivity, combustibility) and physical (i.e., density, melting point, boiling point) properties of matter. <b>d.</b> Construct an argument based on observational evidence to support the claim that when a change in a substance occurs, it can be classified as either chemical or physical.</p> <p><b>e.</b> Develop models (e.g., atomic-level models, including drawings, and computer representations) by analyzing patterns within the periodic table that illustrate the structure, composition, and characteristics of atoms (protons, neutrons, and electrons) and simple molecules.</p> <p><b>f.</b> Construct an explanation based on evidence to describe conservation of matter in a chemical reaction including the resulting differences between</p>	<p>height of an object.</p> <p><b>b.</b> Plan and carry out an investigation to explain the transformation between kinetic and potential energy within a system (e.g., roller coasters, pendulums, rubber bands, etc.).</p> <p><b>c.</b> Construct an argument to support a claim about the type of energy transformations within a system [e.g., lighting a match (light to heat), turning on a light (electrical to light)].</p> <p><b>d.</b> Plan and carry out investigations on the effects of heat transfer on molecular motion as it relates to the collision of atoms (conduction), through space (radiation), or in currents in a liquid or a gas (convection).</p>	<p>(Clarification statement: Include transverse and longitudinal waves and wave parts such as crest, trough, compressions, and rarefactions.)</p> <p><b>b.</b> Construct an explanation using data to illustrate the relationship between the electromagnetic spectrum and energy.</p> <p><b>c.</b> Design a device to illustrate practical applications of the electromagnetic spectrum (e.g., communication, medical, military).</p> <p><b>d.</b> Develop and use a model to compare and contrast how light and sound waves are reflected, refracted, absorbed, diffracted or transmitted through various materials.</p> <p>(Clarification statement: Include echo and how color is seen but do not cover interference and scattering.)</p> <p><b>e.</b> Analyze and interpret data to predict patterns in the relationship between density of media and wave behavior (i.e., speed).</p> <p><b>f.</b> Develop and use a model (e.g., simulations, graphs, illustrations) to predict and describe the relationships between wave properties (e.g., frequency, amplitude, and wavelength) and energy.</p> <p><b>g.</b> Develop and use models to demonstrate the effects that lenses have on light (i.e., formation an image) and their possible technological applications.</p>	<p>(Clarification statement: Students should be able to analyze motion graphs, but students should not be expected to calculate velocity or acceleration.)</p> <p><b>b.</b> Construct an explanation using Newton’s Laws of Motion to describe the effects of balanced and unbalanced forces on the motion of an object.</p> <p><b>c.</b> Construct an argument from evidence to support the claim that the amount of force needed to accelerate an object is proportional to its mass (inertia).</p>
